LinkedIn: www.linkedin.com/in/mark-syphus-53906472/ | Github: github.com/msyphus |
Portfolio: https://msyphus.github.io/

Full Stack Developer with a background in science, statistics, and operations management. Excellent combination of highly-desired technical skills and invaluable soft-skills. Efficiently led projects with cross-functional teams spanning every inhabited continent in addition to leading a local quality department. Loves using data analytics, QA testing and debugging, and UI/UX design with a Lean flavor to develop products that help organizations and individuals operate efficiently.

APPLICATIONS BUILT

Business Management Trivia Game | https://msyphus.github.io/trivia-game/

- A timed trivia game that teaches business management principles. This is a short, fun way to develop strong leadership skills geared towards creating happy shareholders, employees, and customers. Managers are already busy, so a quick trivia game is an excellent way to sharpen skills in a hectic, stressful lifestyle.
- Built the application on my own using JavaScript, jQuery, Bootstrap, CSS, and HTML.

QC Testing Dashboard | No link available (Company Proprietary Info)

- As Quality Manager – Skretting USA: Existing software solutions did not provide visibility to production operators or useful reports for the Quality Department, resulting in rework production and difficulty making efficient improvements. Built the app and led a team of Quality Technicians, Production Manager, Production Supervisors, and Line Workers to develop a tool that meets everyone's needs and test it out for smooth implementation.
- An Excel Dashboard to log QC testing of production runs and automatically determine if product passes or fails quality criteria.
- Pulled data from database server and external files, reformatted for usability in Excel, calculated individual test and overall production run pass/fail logic, communicated across multiple computers with simultaneous users, automatically printed completed run report and stored results in external file for long-term monitoring and report generation.

EXPERIENCE

Disruptiv Innovations **5/2019 - Present**
Web Designer and Product Development Consultant

- Develop and maintain website, SEO strategy, and social media presence.
- Design products and graphics, create prototypes, and conduct market analyses for new products.
